Regarding release changes made from Level 4 to RBR Trace, the following changes created erroneous Release A RBR's.

Current 1st rel	New rel based on L4s	
LAND-0120#B	LAND-0120#A	This is wrong!!
LAND-0130#B	LAND-0130#A	This is wrong!!

LAND-0120 and LAND-0130 are interface requirements between ECS (CSMS) and the Landsat Mission Management Office (MMO) to exchange system status information.

These requirements do not in any way apply to Release A. Release A for Landsat only involves early interface tests with another Landsat element (i.e. LPS).

Conclusion: Change Level 4 Release to "B", since Level 4's specifically relate to the ECS-Landsat 7 IRD.
